

Item # HP12110, The Fox Poultry Forklift

The only Fox you want in your hen house!

The Master Craft Poultry forklift is a low profile, hydrostatic powered design for use in the chicken growing industry. The hydrostatic drive eliminates the need for changing gears. The forklift can be shifted into the opposite direction of travel at any speed, however, it will not actually shift until the machine slows to a specified speed. This helps to eliminate excessive wear and tear on the power train. It has a fail-safe parking brake that is automatically engaged when the engine is switched off.

The Poultry has a capacity of 3,600 lbs. with a 48 in. load center and is available with either a 129" or 144" lift height. The mast is a stepped design which allows for up to 6 in. of free lift before the mast rails start to raise. A 43° rotator makes quick work of loading the trailer and can be used to maintain a level load when navigating across uneven terrain.

The Poultry forklift is available with a Caterpillar C4.4 direct-injected turbocharged diesel engine, Linde hydrostatic drive pump and motor, New Holland drive axle and Master Craft heavy duty box style constructed 2WD steer axle with double steer cylinders.

All Master Craft forklifts have a 12 month or 2000 hour warranty from defects in material and workmanship.

Specifications

Lift Capacity @ 48" LC	3,600 lb
Mast Height Range	129" 144"
Engine	Cat Tier 3 C4.4 DIT 4 cyl. diesel turbo charged engine
HP	94
Engine Capacity	4.4 liters
Transmission	Linde Hydrostatic Pump & Motor
Drive Axle	New Holland D45I drive axle w/ activated wet disc brakes hydraulic dual micro service brake and park brake cylinder differential lock
Wheel Drive	2WD
Standard Mast Tilt	15F-12R
Standard Carriage	54 in wide slope piler 43 degree rotator
Total Mast Side Shift	6"
Steer Axle	MC 2WD steer axle HD
